

## By the Campus Puzzlers' League

### Solution to FILLOMINO:

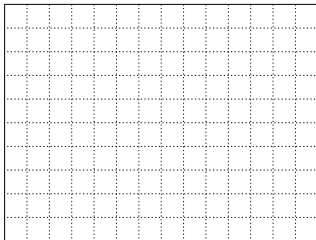

Solving the grid and coloring in the *prime* polyominoes yields the above image, clearly displaying the letter **N**.

For our final puzzle of the term, we present a crossword, but with a twist -- this time, you won't be told where the words go in the grid. For that matter, you'll only have the grid outline -- the black squares won't be filled in. Solve the clues, arrange them appropriately, and extract a single letter answer. You can check it on our website below.

And with that, you should have 6 letters, one from each puzzle this term. Now put them together appropriately to get the metapuzzle answer and complete this term's puzzle series. You can check that on the website as well. We will print the solutions here next week.

## CROSSWORD

### Across:

- The open letters (5)
- "\_\_\_ Given Sunday" (3)
- One might be a Steinway (4,5,5)
- Daybreaks (5)
- Gives off (5)
